Display Neither of these leaf blowers has a display in the sense of a screen, so there's no difference here in the usual consumer-electronics sense. What matters instead is how intuitive the controls feel in use. The LB6150 uses variable-speed control, which gives you finer adjustment when clearing light debris from gravel, borders, decking, or a small paved area. The LB5300 uses 3-speed turbo control, which is simpler but less precise. Winner: LB6150, because variable control is more useful in real garden work.

Performance This is the biggest difference and the main reason to choose one model over the other. The LB6150 is rated at 615 CFM, while the LB5300 is rated at 530 CFM. That extra airflow is significant: it helps shift damp leaves, grass clippings, and heavier debris faster, which is especially useful in the UK where autumn leaves are often wet and stuck down. In practical terms, the LB6150 should clear larger lawns, driveways, and garden paths with fewer passes. The LB5300 is still a strong blower, but it is the weaker tool here on raw output. Winner: LB6150, clearly.

Build quality and design Both are EGO products, so you can expect solid build quality, good ergonomics, and compatibility with the same 56V battery ecosystem. EGO blowers are generally well regarded for being sturdy without feeling overly heavy, and both of these are cordless, which makes them far easier to use than petrol models. The LB6150's variable-speed layout is arguably more versatile, while the LB5300's 3-speed turbo design may appeal to users who prefer a more straightforward interface. There is no obvious build-quality edge for the pricier model, so the design win goes to the LB6150 for better flexibility without sacrificing usability. Winner: LB6150.

Battery life Because neither product includes a battery or charger, runtime depends entirely on which EGO battery you own or buy. In general, a blower with lower airflow settings can stretch battery life, so the LB5300 may have a small advantage if you use it mostly on lower speeds. However, the LB6150's variable-speed control gives you more ability to conserve power by dialing down output when you do not need full force. In real use, that makes the LB6150 easier to match to the job, which is often better than having only fixed steps. Winner: slight edge to LB6150 for efficiency control, though actual runtime depends on battery size.

Price and value for money This is where the LB6150 pulls away decisively. At £149.00, it is £78.53 cheaper than the LB5300, which is a very large gap for two blowers from the same brand with the same 4.6/5 rating. The LB5300 costs £227.53, yet it delivers lower airflow and fewer speed options. That makes it difficult to justify unless you specifically prefer its control scheme or are buying it as part of a broader setup where price is less important than matching an existing tool preference. Winner: LB6150, by a wide margin.

Game library/features Leaf blowers do not have game libraries, so the useful comparison here is features. The LB6150's variable-speed trigger/control is the more practical feature because it lets you fine-tune airflow for delicate areas, then ramp up for soggy leaves or stubborn debris. The LB5300's 3-speed turbo is simpler, but it offers less granularity and no obvious functional advantage over the newer, more powerful model. In feature terms, the LB6150 gives you more usable control for less money. Winner: LB6150.

Overall user experience For most UK homeowners, the LB6150 should feel like the better day-to-day tool. It has more blowing power, more control, and a much better price, which matters whether you are clearing a modest terraced garden, a suburban driveway, or a larger lawn after a windy autumn weekend. The LB5300 is still a capable EGO blower, and its 3-speed turbo setup may appeal to users who want straightforward operation, but it is hard to recommend when it costs substantially more and offers less performance. If you already own EGO 56V batteries, the value gap becomes even more important because the battery ecosystem benefit is identical either way. Overall summary: the LB6150 is the better buy for almost everyone, combining stronger performance, better control, and far better value. The LB5300 only makes sense if you specifically prefer its control style and do not mind paying a premium for it.

Winner: a

The LB6150 is the clear winner because it is both more powerful and much cheaper. With 615 CFM versus 530 CFM, it will clear wet autumn leaves, grass clippings, and driveway debris more effectively, which is exactly what UK gardens demand. At £149, it undercuts the LB5300 by £78.53 while also offering variable-speed control instead of a simpler 3-speed setup. Unless you have a very specific reason to want the LB5300, the LB6150 is the better purchase.

Buy Product A If...

Buy the LB6150 if you want the best all-round value and the strongest performance for the money. It is the better choice for most UK gardens, especially if you deal with damp leaves, larger paved areas, or regular seasonal clean-ups. It is also the smarter pick if you already own EGO batteries and want the most capable blower without overspending.

Buy Product B If...

Buy the LB5300 only if you specifically prefer a 3-speed turbo layout and are happy paying more for it. It may suit someone who values a simple, fixed-step control feel over maximum airflow. If price is not a concern and you want that exact operating style, it remains a solid EGO blower.
